

Reference the Greatland Laser Flare

“As a Search and Rescue Coordinator for over 19 years I have seen gizmo’s come and go. When I first heard of the Laser Flare I thought it would be another piece of equipment that wouldn’t be of much use for Search and Rescue. On May 16th 2009 I personally used the Green Rescue Laser Flare in both daylight and dark of night settings. I was very impressed in what I saw and look forward to trying it in fog and raining conditions. It was easy to use and the light signal that is created would easily be seen by rescuers at a great distance. We plan to continue to test the Rescue Laser in other environments, and if it operates in other conditions as demonstrated, it will be a great tool for both Rescuers and Victims alike.”
